

Product Requirements Document (PRD)

Project Name

SafeReport AI – Intelligent Incident Reporting System

1. Product Overview

SafeReport AI is an AI-powered platform designed to simplify the incident reporting process for victims of harassment, stalking, theft, cybercrime, accidents, and other safety-related incidents. The platform helps users create professional complaints by automatically organizing evidence, extracting key information, and generating complaint drafts.

2. Problem Statement

Many victims fail to report incidents because the traditional reporting process is complicated, time-consuming, and emotionally stressful. Users often need to visit police stations, manually write complaints, organize evidence, and repeatedly explain the incident. This leads to underreporting and delayed action.

3. Product Goal

To reduce the time, effort, and anxiety involved in filing incident reports by using Artificial Intelligence to automate evidence collection, information extraction, and complaint generation.

4. Target Users

- College students
- Women facing harassment or stalking
- Senior citizens
- General public
- Educational institutions
- Law enforcement agencies

5. User Story

As a victim of an incident, I want to upload evidence and briefly describe what happened so that the system can automatically generate a complete complaint and organize all supporting evidence for submission.

6. Functional Requirements

User Registration & Authentication

- Sign up using email or mobile number.
- Secure login and authentication.
- Password recovery option.

Incident Reporting

- Create a new incident report.

- Enter incident details through voice or text.
- Save reports as drafts.

Evidence Management

- Upload photos, videos, audio recordings, and screenshots.
- Automatic evidence categorization.
- Secure evidence storage.

AI Processing

- Speech-to-Text conversion.
- OCR for extracting vehicle numbers and text.
- Automatic extraction of date, time, and location metadata.
- AI-generated incident summary.

Complaint Generation

- Generate a structured complaint automatically.
- Allow user editing before submission.
- Export complaint as PDF.

Tracking & Notifications

- Generate unique complaint ID.
- Track report status.
- Send status notifications.

7. Non-Functional Requirements

Security

- End-to-end encryption.
- Secure user authentication.
- Role-based access control.

Performance

- Complaint generation within 30 seconds.
- Evidence upload success rate above 95%.

Reliability

- 99% system availability.
- Automatic backup and recovery.

Usability

- Simple and intuitive interface.
- Mobile-friendly design.
- Multi-language support.

8. AI Features

- Natural Language Processing (NLP)
- Optical Character Recognition (OCR)
- Speech-to-Text Processing
- Image and Video Analysis
- Automated Complaint Draft Generation

9. Workflow

1. User logs into the application.
2. User creates a new incident report.
3. User uploads photos, videos, or audio evidence.
4. AI extracts relevant information.
5. User provides a brief description.
6. AI generates a complete complaint draft.
7. User reviews and edits the draft.
8. Complaint is submitted or exported.
9. User receives a tracking ID and status updates.

10. Success Metrics

- Reduce complaint preparation time by 80%.
- Increase reporting rates among users.
- Achieve user satisfaction above 90%.
- Maintain secure handling of all evidence.

11. Future Enhancements

- Direct integration with police portals.
- Emergency SOS feature.
- Real-time location sharing.
- AI-powered legal guidance.
- Anonymous reporting option.
- Multilingual voice assistant.

12. Expected Impact

SafeReport AI will encourage more victims to report incidents by making the reporting process simple, fast, secure, and less intimidating. The platform will improve accessibility to justice while helping authorities receive better-organized and more accurate reports.
