

SOP – AI-Based Incident Reporting System (SafeReport AI)

1. Purpose

To provide a fast, simple, and user-friendly method for victims to report incidents by automatically collecting evidence, generating complaint drafts, and organizing information using Artificial Intelligence.

2. Scope

This SOP applies to all users who wish to report incidents such as harassment, stalking, theft, cybercrime, accidents, or other safety-related events through the SafeReport AI platform.

3. Procedure

Step 1: User Registration and Login

- The user opens the application and logs in using a mobile number, email, or government-approved identity verification.
- The system securely authenticates the user.

Step 2: Incident Reporting

- The user selects "Report New Incident."
- The user provides a brief description through voice or text.
- The system records the date and time of submission automatically.

Step 3: Evidence Upload

- The user uploads available evidence such as:
 - Photos
 - Videos
 - Audio recordings
 - Screenshots
- The system stores all uploaded files securely.

Step 4: AI Evidence Analysis

- OCR extracts vehicle registration numbers and text from images.
- Speech-to-Text converts audio and video speech into text.
- AI analyzes uploaded content and identifies important details.
- Metadata such as date, time, and location is extracted when available.

Step 5: Complaint Generation

- AI generates a structured complaint draft.
- The complaint includes:

- Incident summary
- Location
- Date and time
- Suspect information (if available)
- Attached evidence list
- The draft follows standard reporting formats.

Step 6: User Verification

- The user reviews the generated complaint.
- The user may edit or add additional information.
- The user confirms the final version.

Step 7: Submission

- The complaint is submitted electronically to the concerned authority or exported as a PDF document.
- A unique complaint reference number is generated.

Step 8: Status Tracking

- Users can track complaint status through the application.
- Notifications are sent whenever the status changes.

4. Security and Privacy

- All user data is encrypted during storage and transmission.
- Evidence files are stored securely.
- Access is restricted to authorized personnel only.
- User consent is required before submission.

5. Expected Outcome

- Reduced reporting time.
- Improved evidence organization.
- Increased reporting of incidents.
- Better support for victims through a simplified reporting process.

6. Conclusion

SafeReport AI streamlines the traditional incident reporting process by using Artificial Intelligence to collect evidence, generate complaint drafts, and simplify submission, making reporting faster, easier, and more accessible for everyone.
